MANAGERS

Read your meters remotely, and track your consumption

OWNERS

Manage the performance of your site and integrate it into your energy policy

With Energysoft, turn your building **smart**

Remote consumption analytic

Energysoft monitors all your buildings thanks to its customizable dashboards and its ability to send you alarms on malfunctions.
The software solution is hosted in the cloud in a secure way, it does not require any installation and is very easy to use.

Energysoft interconnects with the national distributor information system and automates the collection of data from electric meters without adding any additional equipment :
- Daily load curves
- Periodic or daily index readings

Energysoft includes financial statements according to your pricing options (*)

A multi-site solution

Energysoft processes data from your plants pushed by on-site communication gateways or pulled from tier information systems. Our servers regularly collect data then analyze, aggregate and archive it.

Data rendering and reporting :

- Customizable dashboards consisting of widgets (charts, tables ...) that you assemble according to your needs

- Customizable alerts sent by email, SMS or mobile notifications

- Reports generated and sent automatically

Freely share information

Each user connects under a single portal from their computer, tablet or phone.
You can share with guests (a tenant, an owner,...), the views you have chosen, or build a TV page for a public hall.

A communication pack including **prepaid mobile data**

As an option, we offer a communication pack including an M2M card without subscription (communication over a multi-operator 3G network)

- Pack Pulse : WebdynPulse gateway
- Pack Radio : radio sensors (pulse, temperature et hygrometry) and gateway WebdynRF (or Lora option).
